

ListFiles.mdb

ListFiles.mdb is a utility written in Microsoft Access that will provide a query listing of all file names in a selected directory.

Exportdb displays a single form which allows the user to enter a directory path or browse to the desired directory.

The directory listing is returned in query output format which can be printed or exported to Microsoft Excel.

ListFiles.mdb is written in Access XP and requires references to the Microsoft DAO 3.6 Object Library and Microsoft Office 10.0 Object Library.
